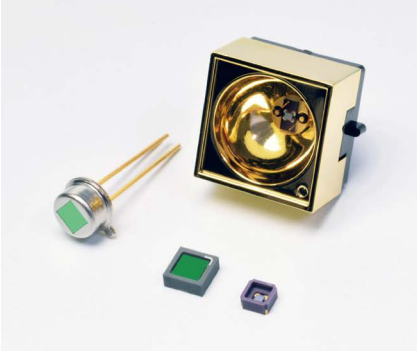
Mid infrared LED



L15893/L15894/L15895 series

Peak emission wavelength: 3.3 µm, 3.9 µm, 4.3 µm

The L15893 series, L15894 series, L15895 series are mid infrared LEDs with the peak wavelength of 3.3 µm, 3.9 µm, and 4.3 µm respectively, manufactured using Hamamatsu unique crystal growth and process technologies. Output is significantly increased compared to the previous products. These are suitable as light sources mounted in gas detectors.

Features

- **High output**
- **High-speed response**
- **High reliability**
- **Low power consumption**
- **Small surface mount type ceramic package (L15893-0330C/CN, L15894-0390C/CN, L15895-0430C/CN)**
- **TO-46 with reflector (for light condensing) (L15893-0330ML, L15894-0390ML, L15895-0430ML)**

Applications

- **Gas detection (CH_4, CO_2)**

Structure

Type no.	Package*1	Window material
L15893-0330C	Surface mount type ceramic	Si with AR coating
L15893-0330CN NEW		None
L15893-0330MA NEW	TO-46	Si with AR coating

*3: Pulse width=10 µs, duty ratio=1%

*4: No dew condensation.
When there is a temperature difference between a product and the surrounding area in high humidity environments, dew condensation may occur on the product surface. Dew condensation on the product may cause deterioration in characteristics and reliability.

*5: Reflow soldering, JEDEC J-STD-020 MSL 3, see P.12

Note: Exceeding the absolute maximum ratings even momentarily may cause a drop in product quality. Always be sure to use the product within the absolute maximum ratings.

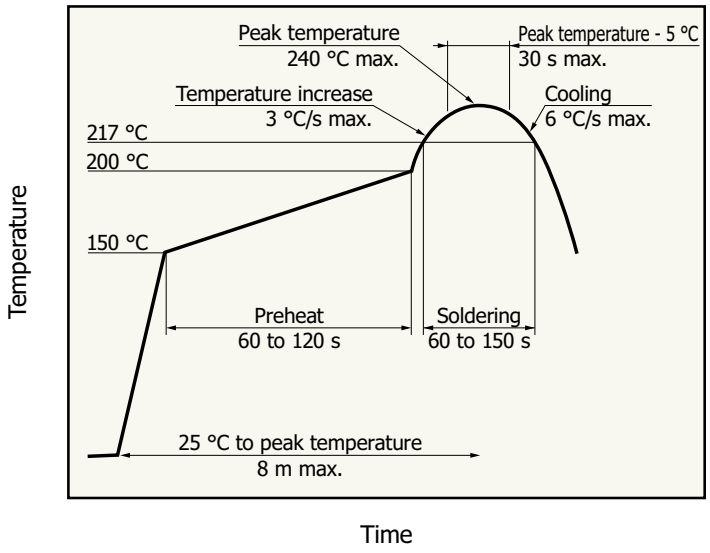
Recommended soldering conditions

L15893-0330C/CN, L15894-0390C/CN, L15895-0430C/CN



- After unpacking, keep it in an environment at a temperature of 5 to 30 °C and a humidity of 60% or less, and perform soldering within 168 hours.
- The effect that the product receives during reflow soldering varies depending on the circuit board and reflow oven that are used. When you set reflow soldering conditions, check that problems do not occur in the product by testing out the conditions in advance.
- If three months have passed in an unpacked state or the above storage period has passed after opening, perform baking to dehumidify before reflow soldering. For the baking, refer to the precautions "Surface mount type products." When you set baking conditions, check that problems do not occur in the product by testing out the conditions in advance.

L15893-0330MA, L15894-0390MA, L15895-0430MA

Solder temperature: 260 °C (5 s or less, once)
Solder the leads at a point at least 2 mm away from the package body.

L15893-0330ML, L15894-0390ML, L15895-0430ML

Solder temperature: 230 °C (5 s or less, once)
Solder the leads at a point at least 2 mm away from the package body.

Note: When you set soldering conditions, check that problems do not occur in the product by testing out the conditions in advance.

Evaluation kit M16953 for InAsSb photovoltaic detector

The M16953 is an evaluation amplifier for gas measurement used in combination with Hamamatsu's InAsSb photovoltaic devices with band-pass filters (TO-46 package). These can detect infrared light transmitted through a band-pass filter simply by connecting a power supply ±2.5 V.

Specifications

- **Applicable devices: InAsSb photovoltaic detectors with band-pass filter*7**
- **Gain: 10^7 V/A**
- **Frequency characteristics: DC to 80 kHz**
- **Recommended drive voltage: ±2.5 V**

*7: InAsSb photovoltaic devices with band-pass filter sold separately

Evaluation kit M16615 for mid infrared LED

The M16615 is a driver for mid infrared LED (TO-46 package). The LED can be pulse-driven simply by connecting a power supply (+15 V). This is used in combination with the evaluation kit M16953 series for InAsSb photovoltaic detector.

Specifications

- **Applicable devices: Mid infrared LED*8**
- **Output current: 400 mA**
- **Output pulse: 10 µs**
- **Output cycle: 1000 µs**
- **Recommended drive voltage: +15 V**

*8: Mid infrared LED sold separately
