

S12742 series, S16014-220

Photodiode with a filter for monochromatic light (220, 254, 275 nm) detection

The S12742 series is a photodiode that has a built-in band-pass filter and is sensitive only to monochromatic light. The series consists of three types with different center sensitivity wavelengths: 220 nm, 254 nm, and 275 nm. S16014-220 is a miniaturized photodiode with a built-in bandpass filter and a center sensitivity wavelength of 220 nm. These products have an extremely narrow response wavelength half width (FWHM), allowing accurate photometry with little stray light. They can be customized to support other peak sensitivity wavelengths such as 340 nm and 560 nm.

Features

- With monochromatic light filter
- Narrow spectral response half width (FWHM)
- Small package: TO-18 (S16014-220)

Applications

- Water quality and atmosphere analysis
- UV monitors (mercury lamp, etc.)

Structure

Parameter	S12742-220/-254/-275	S16014-220	Unit
Photosensitive area	3.61 × 3.61	1.1 × 1.1	mm
Package	TO-5	TO-18	-

Absolute maximum ratings

Parameter	Symbol	Condition	Value	Unit
Reverse voltage	V_R max		5	V
Operating temperature	T_{opr}	No dew condensation*	-20 to +60	°C
Storage temperature	T_{stg}	No dew condensation*	-55 to +80	°C

* When there is a temperature difference between a product and the surrounding area in high humidity environment, dew condensation may occur on the product surface. Dew condensation on the product may cause deterioration in characteristics and reliability.

Note: Exceeding the absolute maximum ratings even momentarily may cause a drop in product quality. Always be sure to use the product within the absolute maximum ratings.

Precautions against UV light exposure

- When UV light irradiation is applied, the product characteristics may degrade. Such examples include degradation of the product's UV sensitivity and increase in dark current. This phenomenon varies depending on the irradiation level, irradiation intensity, operating time, and operating environment and also varies depending on the product model. Before employing the product, we recommend that you check the tolerance under the ultraviolet light environment that the product will be used in.
- Exposure to UV light may cause the characteristics to degrade due to gas released from the resin bonding the product's component materials. As such, we recommend that you avoid applying UV light directly on the resin and apply it on only the inside of the photo-sensitive area by using an aperture or the like.
